MIRRORS

DuraVision™ Mirrors

DuraVision™ polycarbonate mirrors from Norix® are designed specifically for the challenging conditions found in correctional and mental health facilities. The strength of polycarbonate combined with a solid, full foam backing and a unique steel frame design ensures these mirrors exceed the breakability and tamper resistance of any other product on the market.

Features That Matter

360° Visibility

Full, half and quarter dome options allow residents and staff to observe blind corners and intersections without putting themselves or others in harm's way.

Anti-Ligature Design

The flush to the wall design eliminates pass throughs and tie-offs, thus reducing ligature risk.

Extreme Durability

The premium strength polycarbonate mirrors are filled with high-density urethane foam to limit compression distance and protect against severe blows.

Impact Resistance

Unlike the acrylic mirrors commonly seen in commercial institutions, our polycarbonate mirrors are engineered to withstand heavy impacts without the risk of breaking into dangerous, knife-like shards.

Tamper Resistance

The perimeter of the mirror is fully enclosed in a heavy-duty power coated steel frame commissioned with countersunk screw holes to receive tamper-resistant fasteners.
